

Dominion Salem Harbor installed Neundorfer SmartAsh controls on their hopper evacuation system. Part of the installation included feeder thermocouples that enable operators to view hopper temperature as part of the monitoring and diagnostic information on the SmartAsh panel views.

“The flexibility the SmartAsh system provides is great—we have never had indication on our ash levels like we have now. The POS gives our operations people a very good sense of the status and condition of ash removal at any given time. This saves us time and costs associated with physically running around trying to find and solve problems.”
